

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

CAC
H 79-2

TO
HIS EXCELLENCY
DANIEL D. TOMPKINS, Esq.
Governor of the State of New-York;

THE HONOURABLE
THE COUNCIL OF REVISION;

AND
THE MEMBERS OF THE
SENATE AND HOUSE OF ASSEMBLY,

THE PRESENT EDITION OF THE
CATALOGUE OF PLANTS
CULTIVATED IN THE
ELGIN BOTANIC GARDEN,
IS RESPECTFULLY INSCRIBED.

P R E F A C E.

THE establishment of a Botanic Garden in the United States, as a repository of the native plants of this country, and as subservient to the purposes of medicine, agriculture, and the arts, is doubtless an object of great importance. Impressed with the advantages to be derived from an institution of this nature, I have anxiously endeavoured ever since my appointment to the professorship of Botany and Materia Medica in Columbia College, to accomplish its establishment. Disappointed, however, in my first applications to the Legislature of this State, soliciting their assistance in so expensive and arduous an undertaking, I resolved to devote my own private funds to the prosecution of this object; trusting, that when the nature of the institution should be better, and more generally known, and its utility fully ascertained, it would receive the patronage and support of the public.

Accordingly, in the year 1801, I purchased of the Corporation of the city of New-York, twenty acres of ground, situated on the middle road between Bloomingdale and Kingsbridge, and distant from the city about three miles and an half. The view from the most elevated part, is variegated and extensive, and the soil itself of that diversified nature, as to be particularly well adapted to the cultivation of a great variety of vegetable productions. The greater

part of the ground is at present in a state of promising cultivation, arranged in a manner the best adapted to the different kinds of vegetables, and planted agreeably to the most approved style of ornamental gardening. Since that time, an extensive conservatory, for the more hardy green house plants, and two spacious hot houses, for the preservation of those which require a greater degree of heat, the whole exhibiting a front of one hundred and eighty feet, have been erected, and which, experience has shown, are well calculated for the purpose for which they were designed. The whole establishment is surrounded by a belt of forest trees and shrubs, both native and exotic, and these again are enclosed by a stone wall, two and an half feet in thickness, and seven feet in height.

As it has always been a primary object of attention to collect and cultivate in this establishment, the native plants of this country, especially such as are possessed of medicinal properties, or are otherwise useful, such gardeners as were practically acquainted with our indigenous productions, have been employed to procure them: how far this end has been attained, will be best seen by an examination of the Catalogue.

Although much has been done by the governments of Great Britain, France, Spain, Sweden, and Germany, in the investigation of the vegetable productions of America: although much has been accomplished by the labours of *Catesby*, *Kalm*, *Wangenheim*, *Schoepf*, *Walter*, and the *Michaux*; and by our countrymen *Clayton*, the *Bartrams*, *Colden*, *Muhlenberg*, *Marshall*, *Cutler*, and the learned *Professor Barton* of Pennsylvania, much yet remains to be done in this western part of the globe. The numerous articles of medicine which this country has already furnished; the variety of soils and climates which it comprehends, encourage the belief, that many more remain to be discovered, and that the *Materia Medica* may still be enriched by the addition of many indigenous plants, whose virtues yet remain undiscovered.

Another object of importance is, to afford to students of medicine, the means of acquiring a knowledge of the natural history of plants, and the principles of botanic arrangement; a science intimately connected with their profession; as it not only enables them to distinguish one plant from another, but frequently leads to an acquaintance with their medicinal virtues. For this purpose the grounds are divided into different compartments, calculated to exhibit the various plants according to their several properties: and these again are so arranged as to afford a practical illustration of the systems of botany at present most esteemed, viz. the sexual system of *Linnaeus*, and the natural orders of *Jussieu*.

Hitherto the botanical gardens of *Edinburgh, Oxford, Cambridge, London, Paris, Copenhagen, Leyden, Upsal, Goettingen, &c.* have instructed the American youth in this department of medical education; and it is in some degree owing to those establishments that the universities and colleges of those places have become so celebrated, and have been resorted to by students of medicine from all parts of the world.

Since the publication of the first edition of this catalogue, in 1806, this institution has been greatly improved, and by an act of the Legislature, passed on the 12th day of March, 1810, has been purchased by the State for the benefit of the Medical Schools of New-York. For information upon this subject the reader is referred to a production entitled, "*A Statement of Facts relative to the Establishment and Progress of the Elgin Botanic Garden, and the subsequent disposal of the same to the State of New-York,*" just published; in which the liberal and enlightened views of the Legislature, in making so large and honourable an appropriation for the promotion of science are more fully exhibited than would be proper upon this occasion. It will also be perceived by a comparison of the present with the former edition, that very considerable additions have been made to the collection both of the foreign and indigenous

plants contained in that establishment. Gratitude demands of me, on this occasion, an acknowledgment of the obligations I am under to many distinguished botanists, both abroad and at home, who have contributed to this institution. In this number are to be enumerated my much esteemed and respected friend and instructor, *Dr. James Edward Smith*, the learned President of the Linnæan Society of London; the late Professor *Vahl*, and Mr. *Hoffman Bang*, of Copenhagen; Mons. *Desfontaines* and *Thouin*, the celebrated Professors of Botany and Agriculture at the Medical Schools of Paris; Mr. *Salisbury*, Proprietor of the Botanic Garden at Brompton, near London; the late Dr. *Fabroni*, Director of the Royal Museum of Florence; Dr. *Bestock*, the learned President of the Botanic Institution of Liverpool; Dr. *Lettsom*, of London; Dr. *Andrew Michaux*, Editor of the *Flora Boreali Americana*, and Author of the very valuable History of the Forest Trees of North-America, now publishing at Paris; my much esteemed friend Dr. *Alire Raffeneau Delile*, of the Institute of Egypt; Dr. *Alexander Anderson*, Superintendant of the Botanic Garden at St. Vincents; and *Baron De Schack*, of Martinique. From these gentlemen I have received many rare botanical works, and some of the most valuable plants in this collection.

Nor must I be unmindful of the obligations I am under to several gentlemen in this country, distinguished for their taste and talents in this department of science. The Hon. *Robert R. Livingston*, our former Minister in France; Professor *Mitchill*, of this city; *John Stevens*, Esq. of Hoboken; Mr. *Bernard M. Mahon*, of Philadelphia; Mr. *Stephen Elliot*, of Beaufort, South-Carolina; Dr. *Darlington*, and Mr. *John Vaughan*, of Pennsylvania; *John Le Conte*, Esq. of Georgia; Mr. *William Prince*, of Long-Island; and Mr. *Andrew Gentle*, seedsmen, of this city; are also among the contributors to this institution. It is but justice to the merit of my nephew, Dr. *Caspar Wistar Eddy*, a young but accurate botanist, to add, that he has largely aug-

mented the collection of American plants, especially of those of the island of New-York; some of which, viz. two new species of *Gerardia*, were first discovered by him in the vicinity of this city. From my other pupils now industriously prosecuting the study of botany and medicine, more especially Mr. *John W. Francis*, and Mr. *Isaac Roscovett*, of this city, and Mr. *Robert M. Barclay*, of Orange county, I also anticipate many fruits of their labours in this department of science.

It would be injustice to my late gardener, Mr. *Frederick Pursh*, who with a knowledge of the science of botany unites a very extensive and accurate acquaintance with the plants of this country, not to notice the very numerous contributions he has made to the collection, of the native plants of the United States, during the period he had charge of this establishment. The institution is also at present, and has been for some months past, in a very flourishing condition, under the direction of Mr. *Dennison*, who has been very particularly recommended to me by Messrs. *Lee* and *Kennedy*, of Hammersmith. The present state of the collection is an evidence of his attention and skill, and from which I expect great improvements in every part of the establishment.

I avail myself of this occasion to observe, that as soon as measures may be taken by the Regents of the University for the permanent preservation of the Botanic Garden, it is my intention immediately to commence the publication of *AMERICAN BOTANY*, or a *Flora of the United States*. In this work it is my design to give a description of the plant, noticing its essential characters, synonyms, and place of growth, with observations on the uses to which it is applied in medicine, agriculture, or the arts; to be illustrated by a coloured engraving, in the same manner in which the plants of Great-Britain have been published by Dr. *J. E. Smith*, in his *English Botany*. Considerable progress has already been made in obtaining materials for this publication: many of the drawings will be executed by Mr. *James Inderwick*.

a young gentleman of great genius and taste, and others by *John Le Conte, Esq.* whose acquaintance with botany and natural history in general will enable him to execute this part of the work with great fidelity. In *Mr. Pursh*, whose name has already been mentioned, I shall have a very industrious and skilful botanist to collect from different parts of the union such plants as have not yet been assembled at the Botanic Garden.

D. H.

New-York, March 12th, 1811.

Tallow tree	55	Walking leaf	8		
Tamarind	55	Wall cress	9		

Since the foregoing Catalogue has been printed, I have received from that distinguished Botanist, M. Thoun, Professor of Agriculture and Botany at Paris, a third collection of seeds, amounting to 300 species, of such plants as are not contained in this collection. The unceasing exertions of that gentleman, for the promotion of science in this country, as well as his own, deserve a greater tribute of praise than I am able to bestow.

The improvements which may hereafter take place in this institution, and the additions which may be made to the collection of plants, will in future be regularly published, as an annual report to the Legislature, and the Regents of the University.

D. H.
